<tr>
<td><strong>Summary</strong></td>
<td>He purpose of this study municipalities resurrection and the localization of the times with the advent of local residents' quality of life &quot;needs of the various express and local government head, the local people's needs, I'm doing my best, if political trust does not get situation was changed. Welfare services of local residents, welfare policy making new demands on the participants' role and commitment of Governors Factors such as behavior was an opportunity to recognize the need. Municipality in the welfare policy decisions before they are carried out mainly political, social, and economic factors were seen in most cases. However, after the municipality conducted a community leader in the determinant of welfare policy commitment and policy-making behavior of participants is that the important factor. These determinants of welfare policy in terms of factors affecting the political, economic, institutional, and behavioral dimensions studied by the configuration information. The results are as follows: Validity and reliability political and economic factors (43%), institutional factors (56%), and behavioral Factors (64%), respectively. Thus, the welfare policy decisions that affect the largest number of factors that could see behavioral factors.</td>

<tr>
<td><strong>Summary</strong></td>
<td>In Korea, the weak part of the natural resources of energy take the form of a perfectly competitive market is difficult. Part of the energy is increased foreign influence social is extremely expensive. Under these circumstances, the interest of the government energy sector is a reality that can not be neglected. Eventually comes to energy supply and demand government intervention is inevitable. Therefore, the government's energy policy to promote national policies for economic stability and will consider in the primary target. In order to achieve these policy objectives the supply side and demand-side divide is necessary for reliable measures. Improvement of energy supply policy in the direction of the supply side and demand side has been proposed as follows. First, the supply-side management and development of domestic energy resources and imports in overseas resource development to promote a stable supply of energy for the development of renewable energy sources and energy diversification and Lead reserve policy should include. Second, the demand for rationalization in terms of promoting energy conservation and use of alternative energy supply by promoting and expanding the policy including price management, financial markets and tax breaks, subsidies, including the legal and institutional arrangements necessary to prepare the research results are presented.</td>

### Policy conflict for the Central Government and Local Governments

**Nominations**
Korean Local Government Review

**Announced Date of**

**Summary**
Is to increase the role of government as policy conflict increased, and that is a phenomenon. In this paper, the problem of conflict and solutions through the three different cases of conflict (KTX Cheonan, Asan designation decision, radioactive waste siting, Sihwa the Development Project) has been suggested.

For the trust factor and divided by institutional factors and to find solutions. Examined for the paradigm shift of each subject, and ensure the credibility of the central government, to solve the solution of the conflict as a trust factor for a neutral third party secure the participation of local residents, and institutional factors for resolving the conflict, legislation, a special law enacted to attract NIMBY, specializing in dispute resolution and installation of specialist training institutions, etc. were examined. Just have three cases for resolving the conflict, to derive a generalized limitation and future research is needed for resolving the conflict.

- **Key Words**: Reliability, Institutional factors, legislation for Conflict Resolution, Dispute Resolution Professional engine installation, For solving a neutral third-party.

### A Study of the Features of Parsing in Different Linguistic Theories

**Nominations**
Language & Information Society

**Announced Date of**
Vol. 18. no 16.

**Summary**
According to the definitions of parsing in linguistic lexicons the term is generally defined as ‘breaking sentence down into its constituents’, ‘syntactic analysis of sentence’ or ‘structure analysis of sentence’ etc. The primary purpose of parsing is, in the traditional view, to analyze and understand the sentence structure in Western classical languages, above all in Latin and Greek. Based on its traditional use the parsing is primarily, up to now, utilized in investigating similarities and differences between natural languages and in foreign language education. But recently the application areas of parsing is much expanding. In the last half of the 20th century the parsing is going beyond the pure research fields dealing with structure analysis of sentences in human languages to the applied research fields which aims to make machines or computers understand human languages. In this context, computer linguistics and artificial intelligence are chiefly discussed. On the other hand, in psycholinguistics the parsing is used to disclose human
### Study on the Introduction of the Korean Language Development Fund

**Summary**

Writing by the local government relief symbol 'FAST CHEONAN' (FAST the first, abundant, satisfied, technologic first letter of the city, Cheonan) rather than as a foreign language elements in a language that recognizes the desire to write here instead of charges inherited language development is a key proposal to raise funds. By default, the current issue of our language community that values its own language and the language claims that values freedom of choice is to argue that diverging. This language is in danger of the current situation in the premise that changes in the language of the crisis and the policy framework of analysis by the "social regulation" is believed to be the need to adopt. This situation with the ethics of the community, the freedom of personal choice it is difficult to prevent. That is the freedom to choose the language recognized as a foreign language, but as a foreign language when writing a social regulatory mechanism for language development fund charges are proposed to be charged. One feature of linguistic phenomena in the strong position of the written demand deregulation and freedom of choice tend to claim.

Key words: language development fund, social regulations, qualified and unqualified foreign language, culture, language assessors.

</thead>
</table>

#### Summary
21st century economic paradigm shift, and the environment surrounding the regional economy is changing very rapidly. In particular, the core assets of the local economy, the industrial capital (Industrial Capital) in the cultural capital (Cultural Capital) switch that is becoming the driving force in regional economic development based on the 'local resources' importance' is highlighted. Regional economic development, where the appropriate local resources, the integrated management of local government's role is very important. Therefore, the excavation of local resources and utilizing them through the centralization of marketing strategies for the local economy can be free of the administrative and financial support in the private sector through the activities of the conditions for regional economic development is to propose the role of the composition. In this study, the Andong region is distinct from other areas to target local resources and local resources, the need for the development of the characteristics of the product competitiveness through the development of an integrated resource management direction proposed. Key words: local resources, and integrated resource development, the role of local governments, regional economic
**Study on Disabled Welfare Service Operations Management**

**Summary**

State and local governments in the efficient operation of services for people with disabilities to services for people with disabilities currently studying the problems and improvements are intended to be. Operational management of services for people with disabilities in order to effectively present on the operational management of services for people with disabilities to find the problem and evaluate the agency engaged in the first focusing on the subjects, operations management (community involvement, operational capabilities share ratio, operating expertise, and operational accessibility, operating through synthesis) of the problem and find the navigation and operational management methods to improve social integration in terms of disability Services to operate the national consensus to achieve hope to people with disabilities service functions and operations research was. As a result, unlike the general administrative operations management access methods, in part for the disabled should be considered sufficient specificity could be found. Key words: community involvement, and operating expertise, accessibility, operations, operating through synthesis.

**A Study on Staker-Holder of Policy-Making to Behavioristic Factors**

**Summary**

The era of local government in the nation's welfare policy is not enough to meet the demands of the welfare of the residents are not. Is one of the reasons the way policy decisions by relying on a top down approach to the local situation and the demand of the consumer welfare policies properly reflect not been able to. Provider of welfare-oriented policies from the bottom up approach to welfare policy by the welfare of the customer first policy-oriented decisions are deemed necessary. Behavioral factors such as value judgments in welfare policy makers, and important factors influencing the value judgments. Role and political commitment, policy factors determine the behavior of the participants consists of the morality and legality. Factor analysis based on the survey participant's behavior policy decisions. Set and correlation analysis and regression analysis were trying to prove the hypothesis. The results are as follows. First, it was now until the welfare of the way policy decisions and policy decisions on factors that affect the welfare of local residents factors alone can not meet the demand because of factors determine the behavior of the welfare policies directly or indirectly affecting the Second, it showed that the behavior of the participants in the decision-making factor in many decisions that affect the welfare policy. Third, the factors (role, political will, and the legality, morality, welfare policy) influence the behavior of people to participate in policy decisions in order to increase residents satisfaction was. Key words: (Role, Legality, Morality, Political Will)
